

10 AI Prompts to Make Yourself *Indispensable* at Work

The prompts that turn "AI might replace me" into "I'm the person who uses it best." No fear, no hype — just how to become the most valuable person in the room this month.

A free field guide.

Works with any AI chat tool.

AI won't take your job. Someone using it will.

START HERE

Stop competing with AI. Start standing on it.

The people who lose to AI are the ones who do the exact task it does. The people who win use it to **do the things their job actually rewards — faster, clearer, and more often than anyone else.**

You don't need to become a "prompt engineer." You need to point AI at the boring, slow, or intimidating parts of your real job so you show up as the person who **gets more done, communicates clearly, and is always the most prepared.** These 10 prompts do exactly that.

How to use this

Open any AI chat. Copy a prompt, swap the **orange blanks** for your real situation, send. Treat the output as a strong first draft — your judgment is what makes it good. Never paste confidential company data into a public tool; use made-up or generalized details.

- **Prompts 1-4** — get more done and look sharper doing it.
- **Prompts 5-7** — communicate so people say yes.
- **Prompts 8-10** — become the obvious go-to person.

Do more. Look sharper.

01-04

1 Turn your most tedious task into a repeatable workflow

The fastest way to free up hours: hand the boring, repeating part to a process you can reuse every week.

COPY · PASTE · FILL THE BLANKS

Here's a task I do repeatedly at work: [describe the task step by step]. Act as an operations expert. Turn this into a clear, repeatable workflow I can follow (or reuse with AI) every time – number the steps, flag where mistakes usually happen, and give me a reusable prompt/template for the part AI can help with.

2 Draft the thing you've been dreading, in one shot

Reports, updates, proposals — the blank page is the enemy. Get 80% down, then edit.

COPY · PASTE · FILL THE BLANKS

Write a strong first draft of: [the document – e.g. a project status update, a proposal, a performance summary]. Audience: [who reads it]. Key points to include: [bullet the facts]. Tone: clear and professional, no filler. Flag anything you're guessing so I can correct it, then suggest a subject line.

3 Be the person who makes complex things simple

Explaining clearly is a superpower people remember. This makes you that person.

COPY · PASTE · FILL THE BLANKS

Explain this in plain language a smart non-expert could follow in 60 seconds: [paste the complex topic, report, or jargon]. Give me: a one-sentence summary, the 3 things that actually matter, and one analogy. Then a 2-line version I could say out loud in a meeting.

4 Walk into any meeting as the most prepared person

Preparation reads as competence. This gets you there in 5 minutes.

COPY · PASTE · FILL THE BLANKS

I have a meeting about: [topic/goal]. Attendees: [roles]. Act as a sharp colleague and give me: the 3 questions likely to come up, a strong answer to each, one smart question I should ask, and the single outcome I should push for.

Say it so they say yes.

05-07

5 Write the email that gets a decision

Most emails bury the ask. This one gets a clear yes or no.

COPY · PASTE · FILL THE BLANKS

Write a short email. Goal: [the decision or action I need]. Recipient: [who + context]. Rules: the ask in the first two lines, the why in one tight paragraph, one clear next step with a date. No "just checking in," no hedging. Give me 2 versions: direct, and warm-but-firm.

6 Turn messy notes or data into a decision

Everyone has the notes. The valuable person turns them into "here's what we should do."

COPY · PASTE · FILL THE BLANKS

Here are my raw notes / numbers: [paste them]. Act as an analyst. Give me: the 3 key takeaways, what they imply, the one decision or recommendation they point to, and the strongest counter-argument I should be ready for. Keep it tight.

7 Handle the hard conversation before you have it

Pushback, a "no," a tense ask — rehearse it and you'll stay calm and clear.

COPY · PASTE · FILL THE BLANKS

I need to have this conversation: [the situation – asking for a raise, pushing back on a deadline, delivering bad news]. Role-play the other person realistically, including their likely objections. Then give me a calm opening line, a response to each objection, and how to close on a good note.

Become the go-to person.

08–10

8 Learn the skill your role needs — fast

The person who levels up quickest becomes indispensable. AI is the fastest tutor you'll ever have.

COPY · PASTE · FILL THE BLANKS

I need to get usable at [skill – e.g. Excel pivot tables, reading a P&L, basic SQL, writing specs] for my job. Build me a 7-day plan: 20–30 minutes a day, each day one concrete thing to practice on a real work example, and a quick way to check I actually learned it. Assume I'm starting from near zero.

9 Catch what could go wrong before it does

Spotting the risk everyone missed is how you become the person leadership trusts.

COPY · PASTE · FILL THE BLANKS

Here's a plan/project I'm working on: [describe it]. Run a pre-mortem: assume it's 3 months later and it failed – list the 5 most likely reasons, ranked, and one concrete thing I could do now to prevent each. Be blunt, not reassuring.

10 Make your work visible (without bragging)

Great work nobody sees doesn't count at review time. This turns your week into a clean record.

COPY · PASTE · FILL THE BLANKS

Here's what I did this week: [dump everything, messy is fine]. Turn it into a 4-bullet "wins" summary framed around impact (what changed / what it enabled / numbers if any), suitable to send my manager or save for my review. Confident, not boastful.

WHEN YOU WANT THE FULL METHOD

These 10 prompts are a taste. The Handbook is the whole system.

If these clicked, **The Everyday AI Handbook** is the next step: not a list of prompts, but the **method** that makes every prompt work — how to give AI the right context, the five patterns behind great results, 20 copy-paste workflows for real work, and the verification habits that keep you from shipping AI mistakes.

- The context method — why most people's AI output is mediocre, and the fix
- Five prompt patterns that cover almost everything you'll ever need
- 20 copy-paste workflows for email, docs, analysis, planning and more
- How to check AI's work so you never get caught out — plus a 30-day plan
